Subject: Additional defoliated areas, Ridgway District

To: Forest Supervisor
Allegheny National Forest

Attn: Bob White

After reviewing the aerial survey results, August 12, 1992, we noted a significant amount of area defoliated but not included on the map. There are extensive areas of sugar maple defoliation and mortality associated with pear thrips and other related pathogens in compartments 14, 39, 52, 53, 54, 55, 66, 67, 75 and 76. There was also extensive defoliation of beech and red maple from Elm Spanworm throughout Highland, Jones, Wetmore and Hamlin Townships.

Our knowledge is based primarily on ground observations in areas where we have been working. We cannot comment on the total area affected except to say that we think it is much more extensive than shown on the map.
